

How to Define a Map Waypoint for a Hotel Address

Used in Module

Products ► Contracts ► [Hotel Name] ► Hotel Tab

Used For

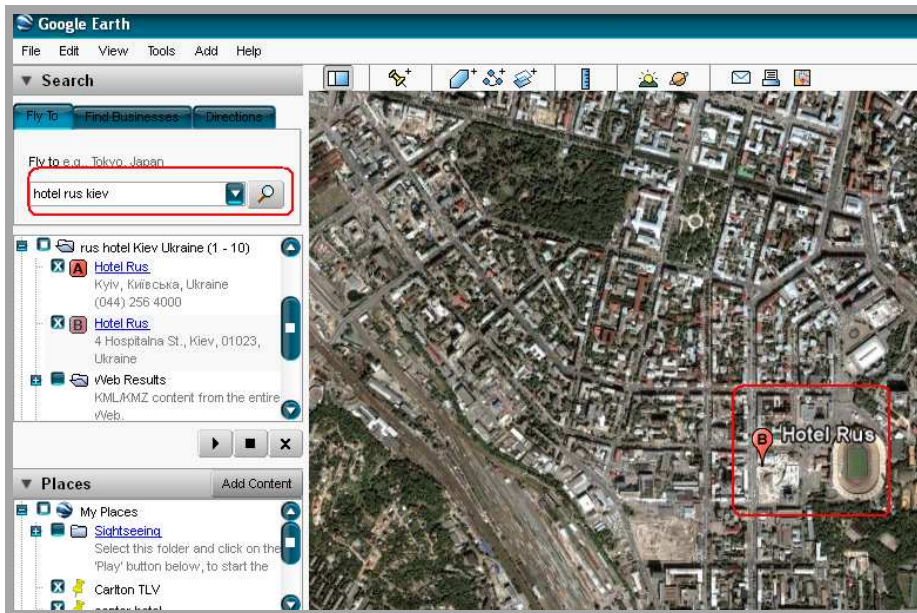

In the Reservations System, hotels can be displayed in **Map View** (see screenshot below). The hotel location is displayed in Google Maps according to the waypoint representing its address. The display of hotels in map view is performed automatically when Google Maps recognizes the hotel address. For hotel addresses *not recognized* by Google Maps, the procedure outlined below is required in order to display a hotel in map view.

Hotel display according to map view in Reservations System

1

Search for the hotel address in Google Earth (<http://earth.google.com>). Following is an example of a search in Google Earth:

2

Hover with the mouse over the hotel icon and note the waypoint.

3

Edit the waypoint according to the following steps.
The waypoint displayed in **Step 2** will serve as our example.
Sample waypoint: **50°26'00.77"N 30°30'59.76"E**

4

Remove from the waypoint all non-alphanumeric characters, decimal points, and spaces.
Sample waypoint after **Step 4**: **50260077N30305976E**

5

Move the letter in the 9th position to the beginning of the waypoint.
Sample waypoint before **Step 5**: **50260077N30305976E**
Sample waypoint after **Step 5**: **N5026007730305976E**

6

Move the letter in the last position to the 10th position of the waypoint.
Sample waypoint before **Step 6**: **N5026007730305976E**
Sample waypoint after **Step 6**: **N50260077E30305976**

7

Insert the number 0 (zero) in the 11th position of the waypoint.
Sample waypoint before **Step 7**: **N50260077E30305976**
Sample waypoint after **Step 7**: **N50260077E030305976**
This is the waypoint value to be entered into Travel Booster.

8

Access the Travel Booster Administration interface.

9

Go to **Products** ► **Contracts** ► **[Hotel Name]** ► **Hotel** Tab

10

Enter the edited waypoint into the **Waypoint** field.
